PROFESSIONAL SUMMARY

New Grad Software Engineer and **Rice University Master of Computer Science** graduate with two software engineering internships building full-stack product tools, backend APIs, and cloud-deployed systems. Experienced across **React** and **Next.js** product interfaces, **Fastify** and **Python** API workflows, **PostgreSQL** and **MySQL** data modeling, **OAuth 2.0** and **JWT** authentication flows, and **app-controlled agentic AI workflows**.

EDUCATION

Rice University <i>Master of Computer Science</i>	Houston, TX <i>December 2025</i>
Feng Chia University <i>Bachelor of Information Engineering & Computer Science</i>	Taichung, Taiwan <i>June 2024</i>

WORK EXPERIENCE

Paycom Software <i>Software Development Intern React, TypeScript, Next.js, Docker, AWS Amplify</i>	Irving, TX <i>May 2025 – August 2025</i>
- Built an IDE-style internal prototyping platform with React, TypeScript, Next.js, and Monaco Editor, enabling product and engineering teams to validate UI flows before production implementation. - Developed a drag-and-drop UI Playroom for composing reusable UI prototypes, using Redux Toolkit to preserve component configuration and interaction state across previews. - Containerized the application with Docker and configured AWS Amplify CI/CD to standardize builds, deployments, and environment setup for the internal tool.	
SXB Liberal Arts & Science Tutoring Center <i>Software Engineer Intern Python, SQL, Vue.js, HTML/CSS, JavaScript</i>	Yunlin, Taiwan <i>May 2024 – August 2024</i>
- Built a MySQL-backed billing platform with Python, SQL, and Vue.js for invoice generation, payment tracking, staff lookup, and reconciliation workflows. - Integrated OAuth 2.0 and OIDC login, JWT session handling, route-level authorization, and structured audit logging to protect staff billing workflows. - Migrated legacy billing records with Python ETL scripts and normalized invoice/payment schemas, preserving historical payment lookup accuracy.	

PROJECTS

GatherPoint AI <i>TypeScript, Next.js, Fastify, Azure OpenAI, PostgreSQL, Prisma, pgvector, Redis, Cloudflare R2</i>	- Orchestrated an app-controlled AI discovery workflow that converts natural-language intent into validated planner state, SQL and pgvector retrieval, ranked event cards, and draft-event handoff. - Built viewer-scoped Fastify APIs for event creation, registration, privacy-aware reads, and assistant state, backed by Clerk auth, Zod validation, Redis rate limits, and PostgreSQL data access. - Shipped an owner-scoped media lifecycle for event images, using Cloudflare R2 presigned uploads, permission-checked reads, and background WebP conversion for secure generated and uploaded event images.
iOS Poker Session Tracking & Analytics App <i>Swift, SwiftUI, AWS Lambda, API Gateway, DynamoDB</i>	- Built a SwiftUI MVVM analytics client for session logging, hand-history review, bankroll trends, and social activity, turning poker records into searchable mobile workflows. - Implemented a mobile authentication layer with RS256 JWTs and OAuth 2.0 PKCE sign-in, refresh-token rotation, and JWKS distribution to secure native and API access. - Deployed an AWS Lambda and DynamoDB backend for session, analytics, and social data, using GSIs, conditional writes, TTL cleanup, and GitHub OIDC CI/CD without long-lived AWS keys.
AI Travel Itinerary Recommendation Platform <i>Python, SQL, OpenAI API, Google Maps API</i>	- Built a retrieval-augmented recommendation pipeline that turns user preferences, destination metadata, and time-window constraints into structured OpenAI context for constraint-aware itinerary generation. - Implemented SQL-backed feasibility scoring with Google Maps API signals to rank destinations by schedule fit, travel distance, available time, and preference match, reducing impractical itinerary suggestions.

TECHNICAL SKILLS

Programming Languages:	TypeScript, JavaScript, Python, SQL, Java, Swift, HTML/CSS, C/C++
Frameworks & Libraries:	React, Next.js, Node.js, Fastify, Express, Redux Toolkit, Zod, Tailwind CSS, Vue.js, SwiftUI
Databases & Testing:	PostgreSQL, Prisma, MySQL, DynamoDB, Redis, Playwright, Jest, Vitest
Developer Tools:	Docker, CI/CD, GitHub Actions, GitLab, REST APIs, OpenAI API, AWS, Azure
